

Holiday Lighting and Design

The holiday season is approaching fast and it is time to begin planning your home and landscape decorating for all of your get-togethers and festivities.

At Designscares Colorado, we incorporate the latest trends when designing your lighting by using environmentally conscious materials. If your lights are getting old and worn out, this is the year you should consider "going green" and converting to a LED (Light Emitting Diode) system. LED lighting systems are proven to reduce energy costs by 80-90%, are more durable and have an extremely long life span. Lighting designs are no longer limited by the power you have in your yard. The benefit is being able to run a string of lights 1/2 mile long from a single electrical socket.

If you have never experienced professional holiday lighting with us before, make this year your first. Schedule a consultation with our designer to discuss the many options, electrical considerations, and costs. If we've worked with you in the past, we appreciate your relationship and look forward to showcasing your home again this year. In addition to lighting for your trees, shrubs, and roof lines, we offer holiday decor items such as wreaths, garland, and festive accents.

Call us for a complimentary estimate and receive 10% discount on all new LED purchases over \$150. (Materials Only)

The fall season is unique in beautiful Colorado!

Labor Day weekend traditionally marks the end of the summer, even though there are several weeks before fall officially arrives. This Indian summer weather we are having is a welcome change from the record rainfall of this year. This is also a sign that it is time to get things done in your yard. Whether it is a landscape project or your annual maintenance services, fall is a great time to plant and garden.

To all our friends and clients we want to say THANK YOU for your support through the past seventeen years. Our dedicated team of employees work hard to make your landscape look its best. We look forward to hearing from you.

planning for spring

Bulbs and Winter Pansies

In order to achieve the earliest color in your neighborhood, fall bulbs are a must!

With spring in mind, we are now bulk ordering bulbs. In order to allow adequate planting time, bulb orders must be received no later than September 30, 2009. Plantings will begin in early October.

As the summer annuals fade into the fall, winter pansies are a great option to get through the cold winter. To achieve maximum bloom from your pansies, we recommend periodic watering during the dry spells in the winter months.

There is a \$275 minimum on all bulb and pansy orders and there is no warranty on annual plantings. **Installation Only** is also available.

Call us for a quote at 303.721.9003.

Landscape Construction and Renovation

The fall and winter seasons are a great time for landscape projects of all types. If you are looking to add a few shrubs or want an entire landscape renovation we can cater to your needs. One of our professional designers can meet with you for a consultation to listen to your ideas and share our thoughts. **Call us to set up an appointment!**

Fall Clean-up, Trimming and Pruning

The final preparation for your yard this winter is a fall clean-up. Fallen leaves and loose undesirable organic material will be removed from rock and mulch areas, ornamental grasses trimmed, and necessary perennials cut back. Pruning and shaping of shrubs and small ornamental trees (less than 12' high) can also be included as part of the clean-up.

Fertilization

Fall is the single most important time to supply your home lawn with the necessary nutrients. Our professional grade fertilizer is loaded with potassium; a key nutrient to promote root growth.

our services

Broadleaf Control

Rid your lawn of unwanted weeds that have moved into drought thinned turf. For best results, we recommend a two-step program that includes a spring and fall weed control application to ensure weeds are removed.

Aeration

Recommended to help reduce thatch, relieve compaction and improve water infiltration into your lawn. For best results, aerate in the fall and spring.

Winter Watering

An often overlooked key ingredient to any good landscape, winter watering provides supplemental nutrients in dry spells. All plants (turf included) still need timely moisture through snowmelt or by supplemental hand watering. Please call for a proposal to ensure your plants receive the necessary amount of moisture during the winter.

NOTE: During a dry winter, you will want to water your lawn to prevent spider mite damage and winter kill.

Sprinkler Winterization

We will start scheduling this service for the second week in October and recommend no later than November 21st (remember that your plants may still need to be hand watered if we are having a moderate winter). It is highly probable that we will experience early cold spells and even snow before some systems are winterized. Proper maintenance and care includes insulating your backflow against these temporary cold spells. For newly installed systems by Designscaapes Colorado, this is a **complimentary** service, but must be scheduled with our maintenance department.

Sprinkler Winterization Pricing

1 to 10 Zones.....	\$ 85.00
11 to 20 Zones.....	\$ 95.00
21 to 30 Zones.....	\$ 105.00
31 to 40 Zones.....	\$ 115.00
41+ Zones.....	Please call for a quote

NOTE: Sprinkler systems are winterized with compressed air and to the best of our knowledge, there is no water left in the lines, therefore we do not warranty any freeze damage that may occur. As a note of conservation, please remember to reduce your watering schedule by 20% during the fall season.

Display your beautiful pots with seasonal décor, call us for a consultation.
